In 2019 Grayson introduced “*Research Spotlight*,” a publication to raise awareness of the impact of Grayson funded research, as well as updates on Grayson events and news.

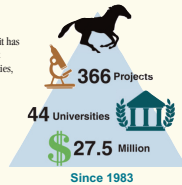

MORE THAN \$1 MILLION IN FUNDING APPROVED FOR EQUINE RESEARCH IN 2019

The board of directors of Grayson-Jockey Club Research Foundation announced today that it has again authorized expenditure of more than \$1 million to fund veterinary research to benefit all horses. The 2019 allotment of \$1,338,858 will fund eight new projects at seven universities, nine continuing projects, and three career development awards.

“We thank our generous donors who recognize the value of veterinary research for enhancing equine health and wellness,” said Jamie Haydon, president of the foundation. “From studying a racehorse’s stride to predict injury to testing an intravitreal antibiotic treatment, we are excited to see the results of these studies and how they may help horses of all breeds in the future.”

The 2019 slate of research brings Grayson-Jockey Club Research Foundation’s totals since 1983 to more than \$27.5 million to underwrite 366 projects at 44 universities.

2019 projects listed on next page

JOHN C. OXLEY TO RECEIVE THE DINNY PHIPPS AWARD

The Grayson-Jockey Club Research Foundation announced today that John C. “Jack” Oxley, a longtime Thoroughbred owner and supporter of Grayson, will be presented with the Dinny Phipps Award at a celebration of The Jockey Club’s 125th anniversary in New York City on Thursday, June 6.

Earle Mack, an active participant in Thoroughbred racing and breeding for more than five decades, created the award in 1917 in memory of Phipps to honor an individual or individuals who have demonstrated dedication to equine health. Previous winners of the Dinny Phipps Award are the Phipps family and Frank Stronach.

“Jack’s dedication to equine health and wellness epitomizes the spirit of the Dinny Phipps Award, and I am pleased to bestow this honor on such a deserving individual,” said Mack.

“We are incredibly grateful for Jack’s support of Grayson and equine research,” said Dell Hancock, chairman of Grayson. “From his generous pledges to his participation on our board of directors, he is an inspiration to all of us who are committed to horses.”

EXERCISE INDUCED PULMONARY HEMORRHAGE

By Dr. Larry Bramlage - Summary results of a pair of research projects

Two research projects on Exercise Induced Pulmonary Hemorrhage (EIPH) solicited by The Grayson-Jockey Club Research Foundation and funded in cooperation with The Jockey Club, the AAEP Foundation, Kearsland Association, Oak Tree Racing Association, The Stronach Group, Churchill Downs, Kentucky Downs, New York Racing Association, The Del Mar Thoroughbred Club, Oaklawn Park, and The Thoroughbred Horsemen’s Association have now appeared in peer-reviewed journals.

Knych H, K, Wilson WD, Maki A, et al. Effectiveness of furosemide in attenuating exercise-induced pulmonary hemorrhage in horses when administered 4- and 24-hours prior to high speed training. *Equine Vet J* 2017;50:350-355.

Rapley W, Lopez C, Sides R, et al. Effect of different protocols on mitigation of exercise induced pulmonary hemorrhage in horses when administered 24 hours before strenuous exercise. *J Vet Intern Med* 2019;1-8. <https://doi.org/10.1111/jvim.15574>

In March of 2015, a special call for research on exercise induced pulmonary hemorrhage was issued by the Grayson-Jockey Club Research Foundation. Emphasis was placed on strategies to control EIPH without race-day medication. Two projects were selected. The premise of the research was to look at the post-treatment effect of furosemide (Salix, or Lasix) if it had been given 24 hours before exercise with water intake limited to maintenance water levels (which are known).

One project submitted by the University of California at Davis under the direction of Dr. Heather Knych proposed to take 15 fit Thoroughbreds with no known history of bleeding, and assess three treatments head-to-head against each other: saline placebo, furosemide four hours before exercise, and furosemide 24 hours before exercise with limited water access. The horses were paired in five-furlong simulated exercise sessions and assessed for bleeding via endoscopic examination using the conventional 0-4 scoring system and via broncho alveolar lavage (BAL) counting the number of red blood cells (RBC) found in the lung lavage post exercise. The horses trained conventionally at a racetrack, and the exercise sessions were separated by a two-week interval.

The results showed with 24-hour administration the pharmacologic level of furosemide is approximately 1-100th the level of circulating medication when compared to four-hour pre-exercise administration. So, more than 99% of the medication has cleared by 24 hours.

In the horses with no known bleeding history, there was one bleeder. He bled with no treatment, and he bled through both treatments, though the four-hour furosemide treatment reduced his grade of bleeding. There were three endoscopic graders and blood in the trachea was seen in 11 of the 43 endoscopic exams; on four exams was the blood more than a grade 1 (trace) and three of those four observations were accounted for by the one horse that bled continuously.

On average there were low levels of RBC’s present in the BAL in all horses after exercise, even with no blood visible endoscopically, but the levels were less than 200(105/ml), even with the bleeding horse included.

So the conclusion from the study was that, though blood was seen on the endoscopic exam in 11 of 43 endoscopic exams, the four-hour furosemide reduced the number of times blood was observed compared to the 24-hour treatment, and the BAL

Grayson continued to publish the online newsletter, "Equine Research News," continuing to distribute information on events, sponsorships, as well as research news.

Equine Research News

A digital presentation of Grayson-Jockey Club Research Foundation
Providers of Equine Research From 1940 thru 2019

Issue 1 • 2019

This special edition of equine research news, features the stallion durability statistics. This publication replicates the previously published RESEARCH TODAY.

STALLION STATISTICS SEEKING DURABILITY, SOUNDNESS

Accompanying is the eleventh annual listing of stallions by two criteria as developed by the Durability Committee of the Welfare and Safety of the Racehorse Summit and written by the Jockey Club and Grayson-Jockey Club Research Foundation. The aim is to highlight stallions which are commercially viable AND produce progeny statistics which would tend to indicate above average performance in two areas—average number of starts per starter and percentage of foals which get to the races. To qualify for the lists, a stallion must have ranked within the first 200 sires by progeny earnings for the calendar year 2018. This assures a modicum of success and relevance to the commercial breeding and sales market. For purposes of this presentation, we have rearranged that population by the two criteria stated and for each list have included the top one-half (100) stallions of the original population of 200 by earnings.

2018 Sires by Lifetime Starts per Starter						
Rank	Stallion	Year	Site	Foals of RA	Starts per Starter

AN INTERVIEW WITH RENOWNED RESEARCHER DR. DOUG ANTCAK

Dr. de Mestre and Dr. Antczak during the International Symposium on Equine Reproduction (ISER) in Cambridge, UK.

Dr. Doug Antczak recently was presented a Lifetime Achievement Award by the International Symposium on Equine Reproduction (ISER). Dr. Antczak has received several grants from Grayson-Jockey Club Research Foundation to fund his projects at Cornell University, and he has served several terms on our Research Advisory Committee.

He was nominated for his recent honor by Dr. Mandi de Mestre, a faculty member of England's Royal Veterinary College and member of the ISER organizing committee. Dr. de Mestre has known Dr. Antczak since she was a summer intern in his laboratory, and she is quoted in Cornell's Baker Institute of Animal Health Annual Report, that "Over the ensuing 30 years... his energy and commitment to equine placenta research and generosity of spirit have not changed. Doug remains an incredibly modest and supportive colleague to work with, with supreme energy supporting equine reproductive research."

Dr. Antczak was interviewed by Edward L. Bowen, retired president of Grayson-Jockey Club Research Foundation.

Please provide basic info, date, place of birth, etc.

Born and raised in Waterbury, Connecticut, 19 December 1947. Father was a dentist with a very busy and popular practice. Mother was a homemaker who devoted her entire life to her five children. I was the oldest. In 2018 my wife Wendy and I celebrated our 40th wedding anniversary. We met

In this edition:

- Dr. Doug Antczak
- Golden Horse Challenge
- Pony Club Science Fair

when I was studying for my PhD at Cambridge University. At that time Wendy was a doctor working at the Addenbrooke's hospital in Cambridge.

We have two grown daughters, Lizzie and Harriet, who spent much of their early years on horseback, campaigning Welsh ponies on the East Coast circuit in the summers. Both girls learned to play polo as young teenagers, and both were accepted to Cornell University, where they earned starting varsity positions on Cornell teams that between them won five national women's intercollegiate polo championships.

Polo coach Stephen Roberts, D.V.M., '84, with the 1984 World Cup Polo Team (varsity players). On horseback, left to right: Don Ladd, Dr. Doug Antczak, '84 and Ed Antczak, '85. Standing, left to right: Paul Wilson and Jeff Springer '85.

I was quite clarified about this, thinking that in addition to my own polo accomplishments as a young man, I was now also a polo player's dad! However, the bubble soon burst when we learned that Wendy's cousin, Henry Brett, was named captain of the English polo team as an 8 goal player. My daughters' success was probably due more to genes from the dad!

Equine Research News

A digital presentation of Grayson-Jockey Club Research Foundation
Providers of Equine Research From 1940 thru 2019

Issue 3 • 2019

The focus of this edition of Equine Research News shifts from funded research to highlighting events and sponsorships that are helping to raise funds and expand awareness.

BUILDING AWARENESS AND CONNECTING WITH HORSE ENTHUSIASTS

The United States Pony Club started in 1954 with the purpose to teach members riding skills and the proper care of horses. Their mission is a good fit with Grayson, and for the second year in a row the foundation sponsored the Pony Club Research Project Fair which was held February 1.

Grayson wants to encourage the care and safety of horses and also promote these pony clubbers to aspire to equine research careers one day.

PRESENTED BY MARS EQUESTRIAN

Grayson was proud to be a sponsor of the 2019 Kentucky Land Rover Three Day Event. This year Grayson provided the Logo T-shirts for over 3,000 volunteers who truly make this annual event successful. The event was telecast on NBC.

The week of the event, top international eventing riders Tim Price from New Zealand, Hensley Bennett-Armed from Canada, and Hannah Sue Burnett of the United States made a special visit to the Kentucky Children's Hospital with Tobias.

Wilma

Dr. Mark Phillips

Donated by:
Kim & Laura Little

Wilma was the most special kind of horse. She loved nothing more than jumping and showing except for bananas, her favorite treat. From her looks to her personality, Wilma was of the extraordinary sort and seemed to have a higher level of understanding. I am convinced she knew how to count her flakes of hay and would not rest until she was given the full amount she was owed. She only wanted to please the people around her and never disappointed me in the show ring or at home. Together we learned how to jump the biggest tracks of our careers, and she always kept her composure. I never did manage to find the top of her scope as her athleticism was not to be overshadowed by her personality. Wilma was a truly exceptional horse, my best friend, and simply gone too soon.

Touching the health of all horses.

**Grayson-Jockey Club
Research Foundation**

Horses strive to be our champions.
We can always be theirs.

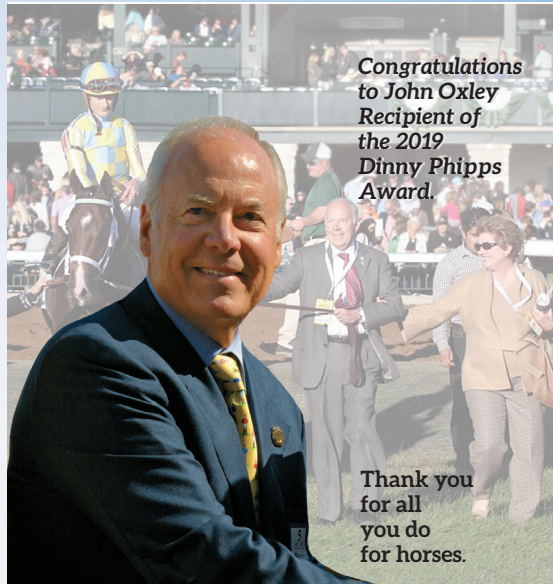

All donations support
equine research, which
helps all horses.
